Environmental Policy

HPS Product Recovery Solutions is a manufacturing company which specializes in liquid product recovery systems (“pigging”) for companies that pump or process liquids.

At HPS Product Recovery Solutions, we are always striving to meet customer expectations by using raw materials, manufacturing products, and processes that conform to ISO 9001 and ISO 14001 standards and Good Manufacturing Practices.

We acknowledge that our operations influence the environment and have identified our key environmental aspects that contribute to our environmental and carbon footprint:

- Consumption of electricity, gas, water, and other fuels
- Waste generation
- Transport emissions
- Use of raw materials
- Procured goods and services with their own environmental impact.

Our company prides itself on providing a product that is beneficial to the environment through the reduction of product waste, carbon, water, and chemicals.

Our management is committed to broadening our environmental sustainability throughout the company, not just by creating a product that helps sustainability but by having a company that wholly embodies sustainability in its ethos. Our business is strengthened by protecting the safety, health and environment of our employees, our customers, and the people of the communities in which we do business.

We are committed to preventing pollution in all aspects of our operations. This involves identifying and minimizing potential sources of pollution, including emissions to air, discharges to water, waste generation, and noise pollution. We achieve this by implementing best practices, investing in sustainable technologies, and adhering to legal and regulatory requirements. Our proactive approach ensures that we continually improve environmental performance, reduce risks to the environment, and support a cleaner, more sustainable future for the industries we serve.

Our environmental commitment can be demonstrated in our established objectives and goals below:

- Compliance with all applicable standards, laws, requirements, regulations, and public/customer expectations.
- Monitor our key resource usage and implement conservation techniques to achieve our environmental targets.
- Implement a waste management policy that encompasses, encourages, and enforces responsible material usage.
- Monitor and control noise emissions caused by operations.
- Commit to achieving Net Zero emissions by 2050.
- Minimize unsustainable transport through the development of personalized travel plans.
- In accordance with Health and Safety requirements, minimize any risk to the public and employees from operations and activities undertaken as part of company activities.
- Work with suppliers to ensure they acknowledge and decrease the environmental impact of their products and transportation.

- Involve, train, and regularly update employees on how we are developing our company sustainability and ways that they can help.

We will continue to improve our environmental management system by working to the ISO 14001 criteria, considering any changes in legislation, our organization, and other factors. We will convey this policy to all our employees, ensuring that they are provided with training to increase awareness of environmental matters.

Lucy Bradford (Compliance Officer), Nicholas Elliot (Production Technician) and Andrei Cox (Client Support Director), form our quality and sustainability department and have designated responsibility for the day-to-day implementation of this policy.

HPS Product Recovery Solutions will make this policy available when requested to interested parties including suppliers, sub-contractors, and the public. A copy of this policy will be available for download on the HPS website.
